

Australian Network for Plant Conservation
presents a workshop on

THE TRANSLOCATION OF THREATENED PLANTS

Tuesday 17th February 2004

Venue: Bottlebrush classroom, Mount Annan Botanic Garden, Mount Annan, New South Wales

Have you been involved in, or would you like to be involved in, the planning, approval or implementation of a translocation project for threatened flora? Then this workshop is relevant to you!

Questions to be addressed include:

- What is translocation?
- When is it appropriate to use translocation as a tool to conserve threatened species?
- What needs to be done when planning a translocation program?
- How should a translocation program be implemented?
- What ongoing management and evaluation is required?
- Where can I go for more information?

The workshop will include case studies of translocation programs, highlighting lessons to be learnt. Participants will also be given the opportunity to provide input into the current revision of the ANPC's guidelines for the translocation of threatened plants.

Translocation is one of the many tools available to assist in conserving threatened plant species. It involves the deliberate transfer of plants or regenerative plant material from one place to another. Translocation can be used to enhance existing populations; reintroduce a species to a site where it formerly occurred, but where it is now extinct; and to introduce a species to a site where it hasn't been recorded previously.

Registrations due by Friday 30th January 2004

ANPC members \$45

Non-members \$55

This Project has been assisted by
the New South Wales Government
through its Environmental Trust
